About Snee

Snee Company was established in 2010 as one of the leading national companies specializing in technical services and consultancy in digital transformation. Snee has played an essential and influential role in demonstrating the knowledge and technical strength of the Kingdom of Saudi Arabia by providing the most advanced systems and infrastructure.

The company has won many local and regional awards for its innovative projects that are compatible with the Kingdom's Vision 2030. It was also distinguished by the quality of its service by applying international and local standards.

Snee Company has been keen to provide its clients with the best solutions to achieve the best governance and institutional excellence standards. We work at Snee Company to provide solutions that suit the client's needs, starting with consulting and finding technical solutions, and ending with technical support, which is through experts in the technical field and institutional excellence. Strategic partnerships with international companies benefit from global expertise to provide the latest technical solutions to the institutions of the Kingdom.

project management system

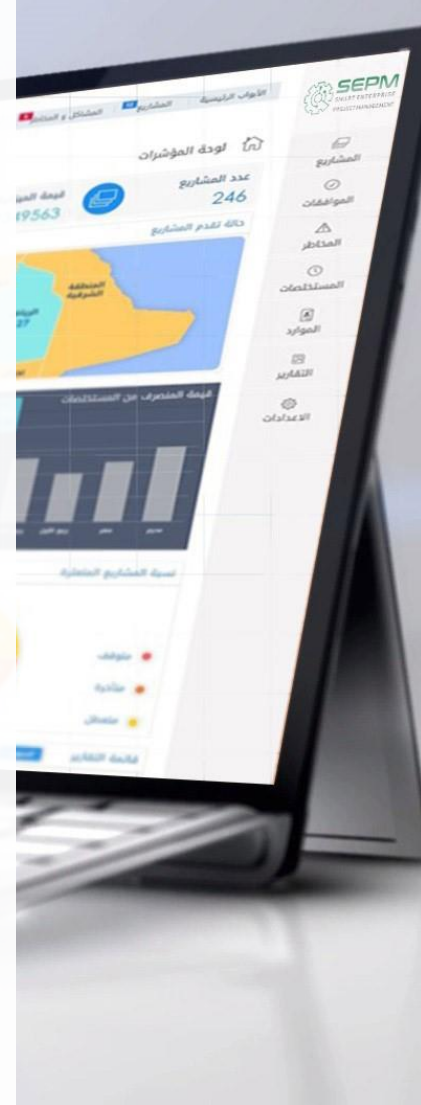

System profile

SEPM enables organizations and companies to more effectively automate procedures related to project follow-up and implementation, and work management and coordination, from one-time projects to complex programs, across the entire project life cycle. SEPM also monitors performance and displays dashboards to facilitate informed decision-making about current projects, new opportunities, and budget processes, and assists supervisors in setting standards for their operations that will ensure a high success rate for the project.
